

Excess non-flu-like deaths by state, 2020-2021 — weekly vs. the 2015-2019 mean

Percent above (red) or below (blue) baseline. Shared scale -30% to +60%, trimmed to the 0.2th-99.8th percentile of all 5,460 state-weeks; the 4 values beyond that are clipped, with the tile's true peak printed. Pale rules mark 1 Jan 2021 and 1 Jan 2022.

Alaska and Hawaii sit off-map at left; NYC, reported separately from New York State, has its own tile.

---- WHO pandemic declaration, 11 Mar 2020

Deaths attributed to causes other than the era's epidemic respiratory ones (influenza and pneumonia before 2020; plus COVID-19 from 2020). A shortfall may reflect deaths recertified to COVID-19 rather than fewer deaths from these causes.
